Projects

My Portfolio Website

React js, HTML, CSS

- Feature a good use of basic HTML tags, CSS variables and react components
- React useState hook was also in good use and a little of useRef to post to a couple of social accounts via email js

Keeper App

React js, HTML, CSS

- A clone of the google keep app with just an add and delete function
- Covers props, components mapping, checking for input state change and primary use of conditional rendering.

My Login Form

React js, HTML, CSS

- A login screen that shows renders the live typed messages in the inputs to the screen
 - This covers the good use of the useState hook and basic HTML and CSS component placement
-
- Other snippets of functional codes covering the basic use of the useEffect hook and other functionalities of the React js libraries can be found in my Github account above.
